

# Potentials and Risks for Creating a Global Sustainable Information Society

---

Wolfgang Hofkirchner

Institute of Design and Technology Assessment, Vienna University of Technology

Unified Theory of Information Research Group, Vienna

Critique, Democracy, and Philosophy in the 21st Century Information Society

The Fourth ICTs-and-Society Conference

Uppsala University, May 2nd - 4th, 2012

# Contents

---

## 1 The Great Bifurcation

1.1 Challenge in complexity

1.2 The nascent Global Sustainable Information Society

## 2 The commons

2.1 The enclosure of the commons

2.2 The current crises

## 3 The dialectic of informatisation

3.1 Informationalisation for the transformation

3.2 Antagonisms of informatisation

# 1 The Great Bifurcation

---

## 1.1 Challenge in complexity

---

global challenges  
= challenges that

(1) affect (the survival of) all humanity (objective factor) and

(2) can successfully be treated only by humanity as a whole  
(subjective factor)

## 1.1 Challenge in complexity

---

global challenges are complex challenges:

their complexity exceeds the problem-solving capacity of any currently existing social system

## 1.2 The nascent Global Sustainable Information Society

---

that complexity might be reduced by an informationalised, sustainabilised, globalised social system, that is, a system that is

(1) existent on a planetary scale – "global" –

(2) capable of acting upon the dangers of anthropogenic breakdown – "sustainable" – because it is

(3) capacitated, by means of ICTs, to create requisite knowledge – "informational"

## 1.2 The nascent Global Sustainable Information Society

---

**a metasytem transition to a possible supra-system**

component societies

world society in statu nascendi

## 1.2 The nascent Global Sustainable Information Society

---

### a metasytem transition to a possible supra-system

## 1.2 The nascent Global Sustainable Information Society

---

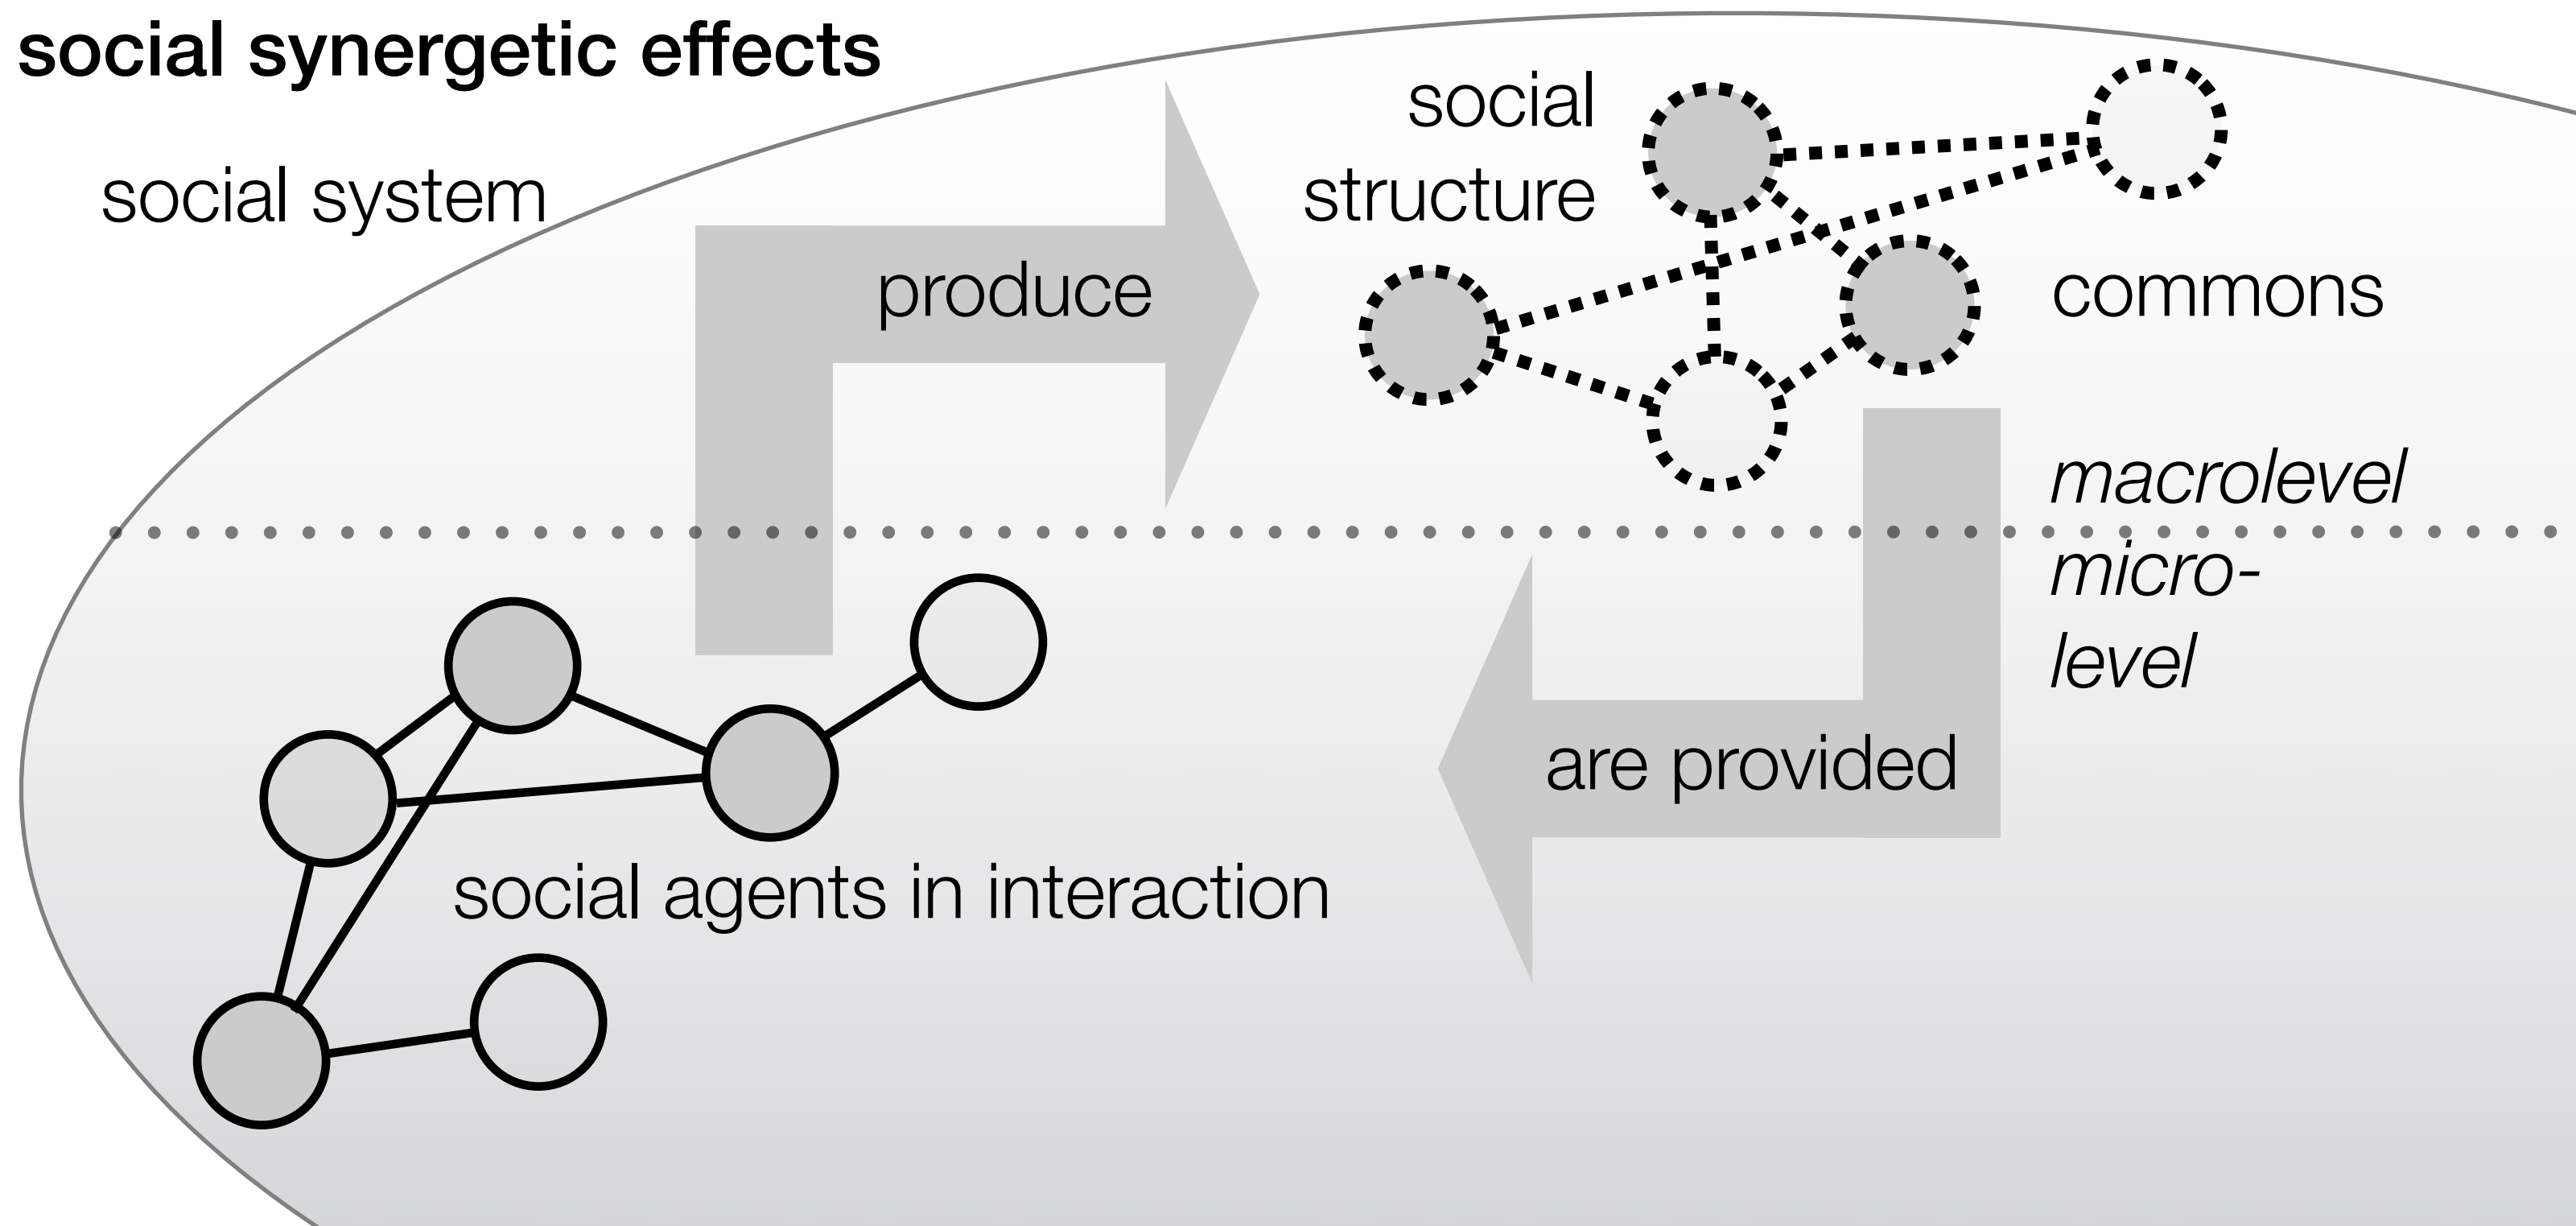

- the evolution of social systems has reached a critical point:
- the evolutionary process paves the way for an organisation of higher order of social systems such that they are enabled to catch up with the complexity that ensues from their own development;
- however, the social systems can fail!

## 2 The commons

---

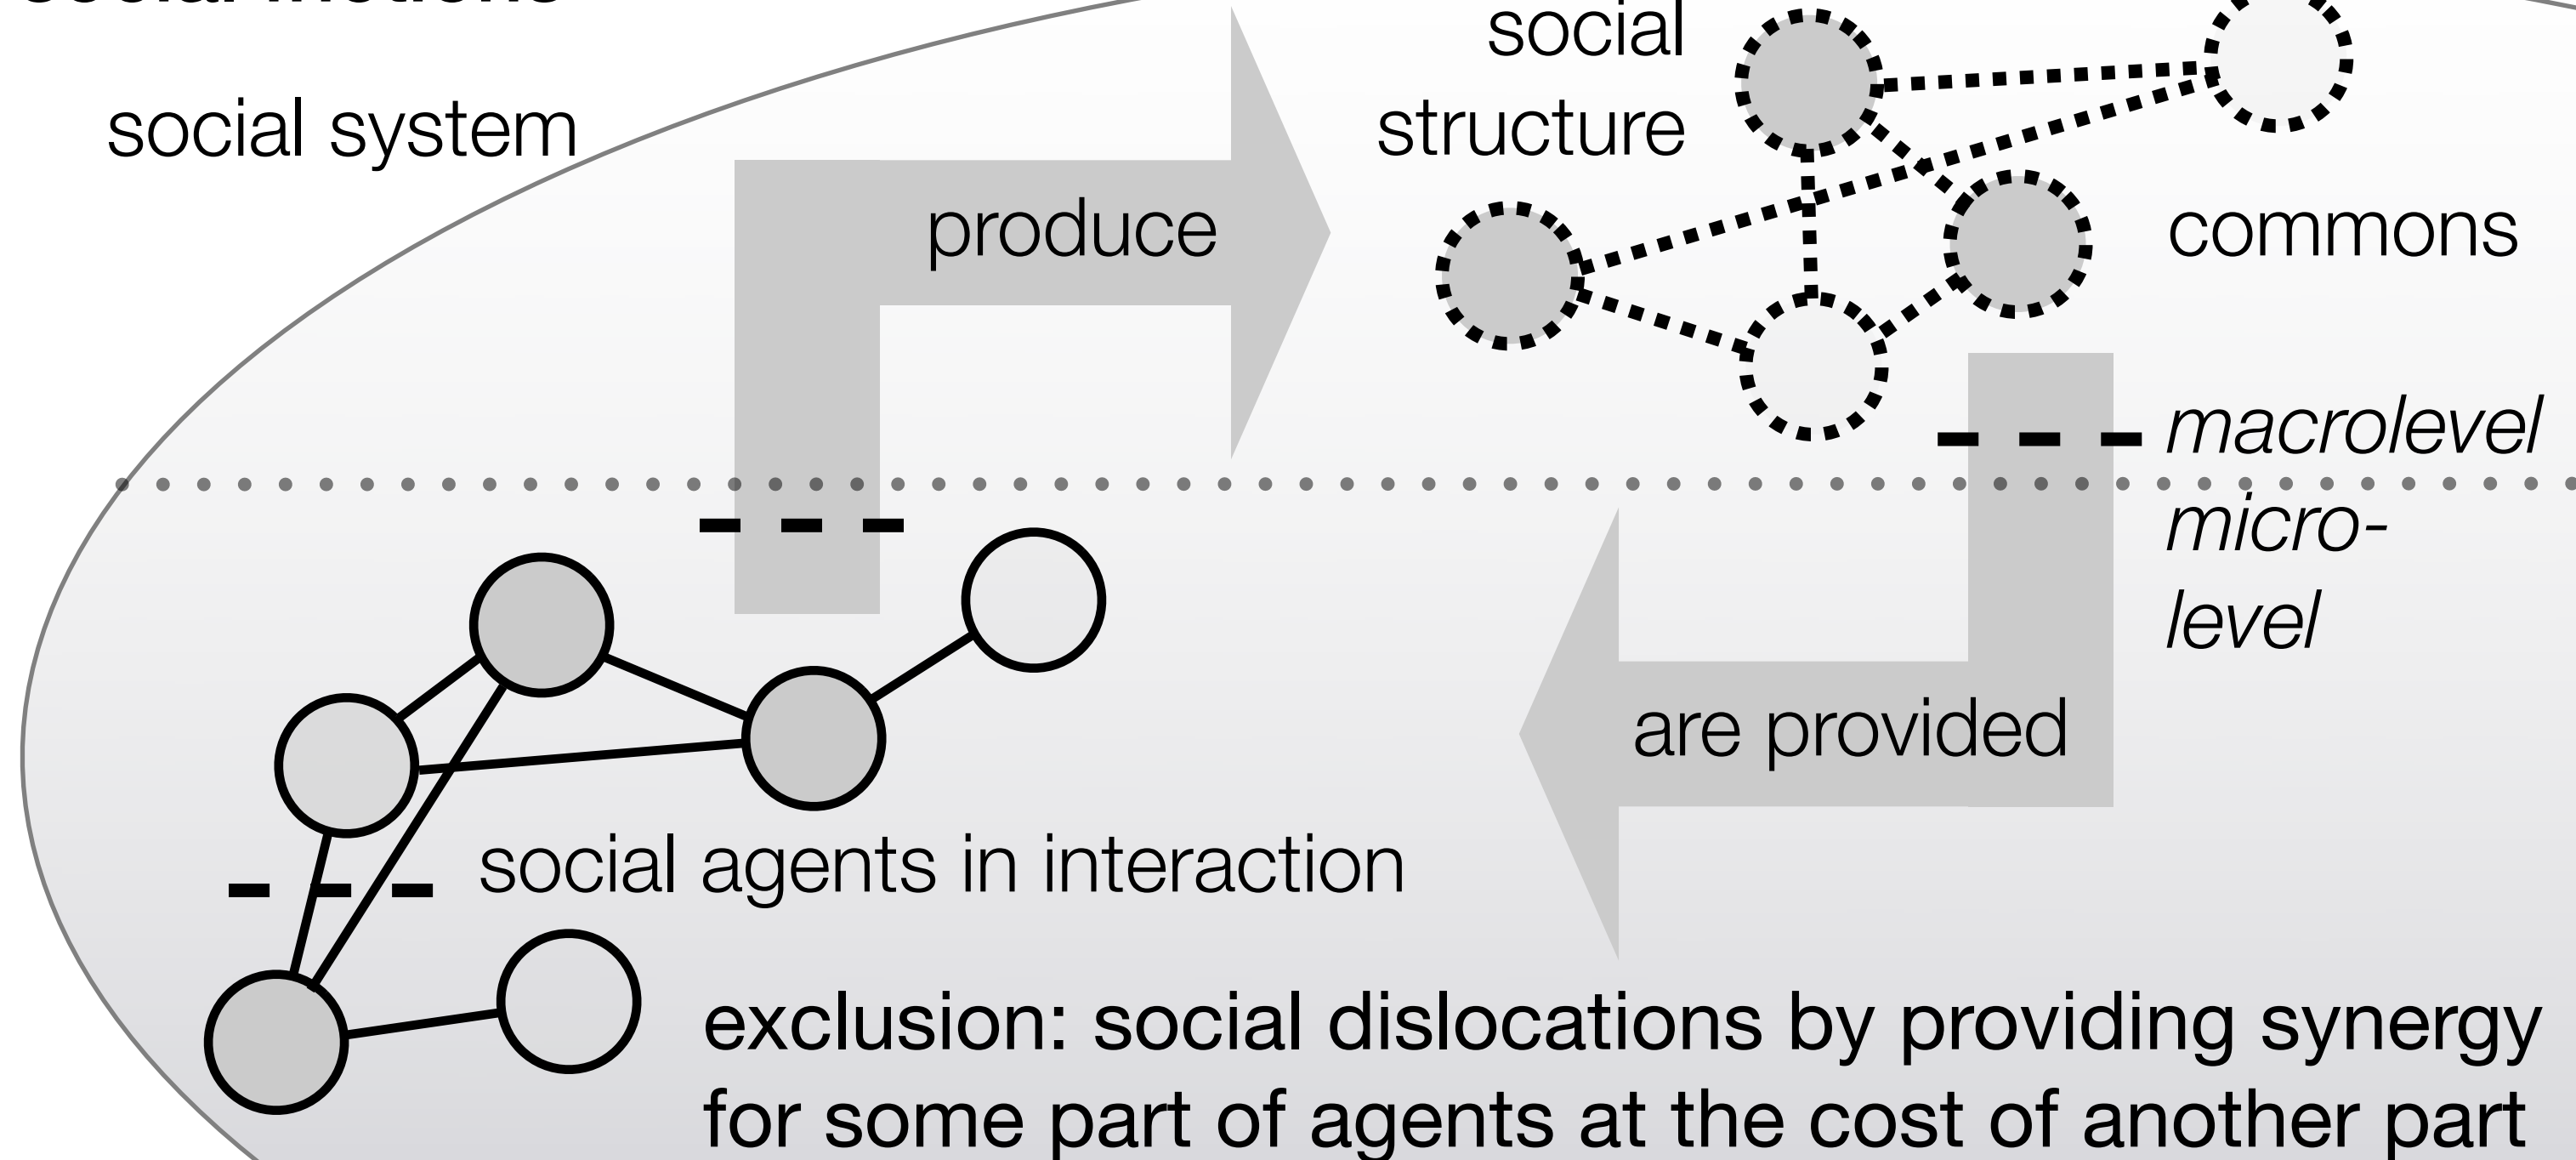

## 2.1 The enclosure of the commons

### social synergetic effects

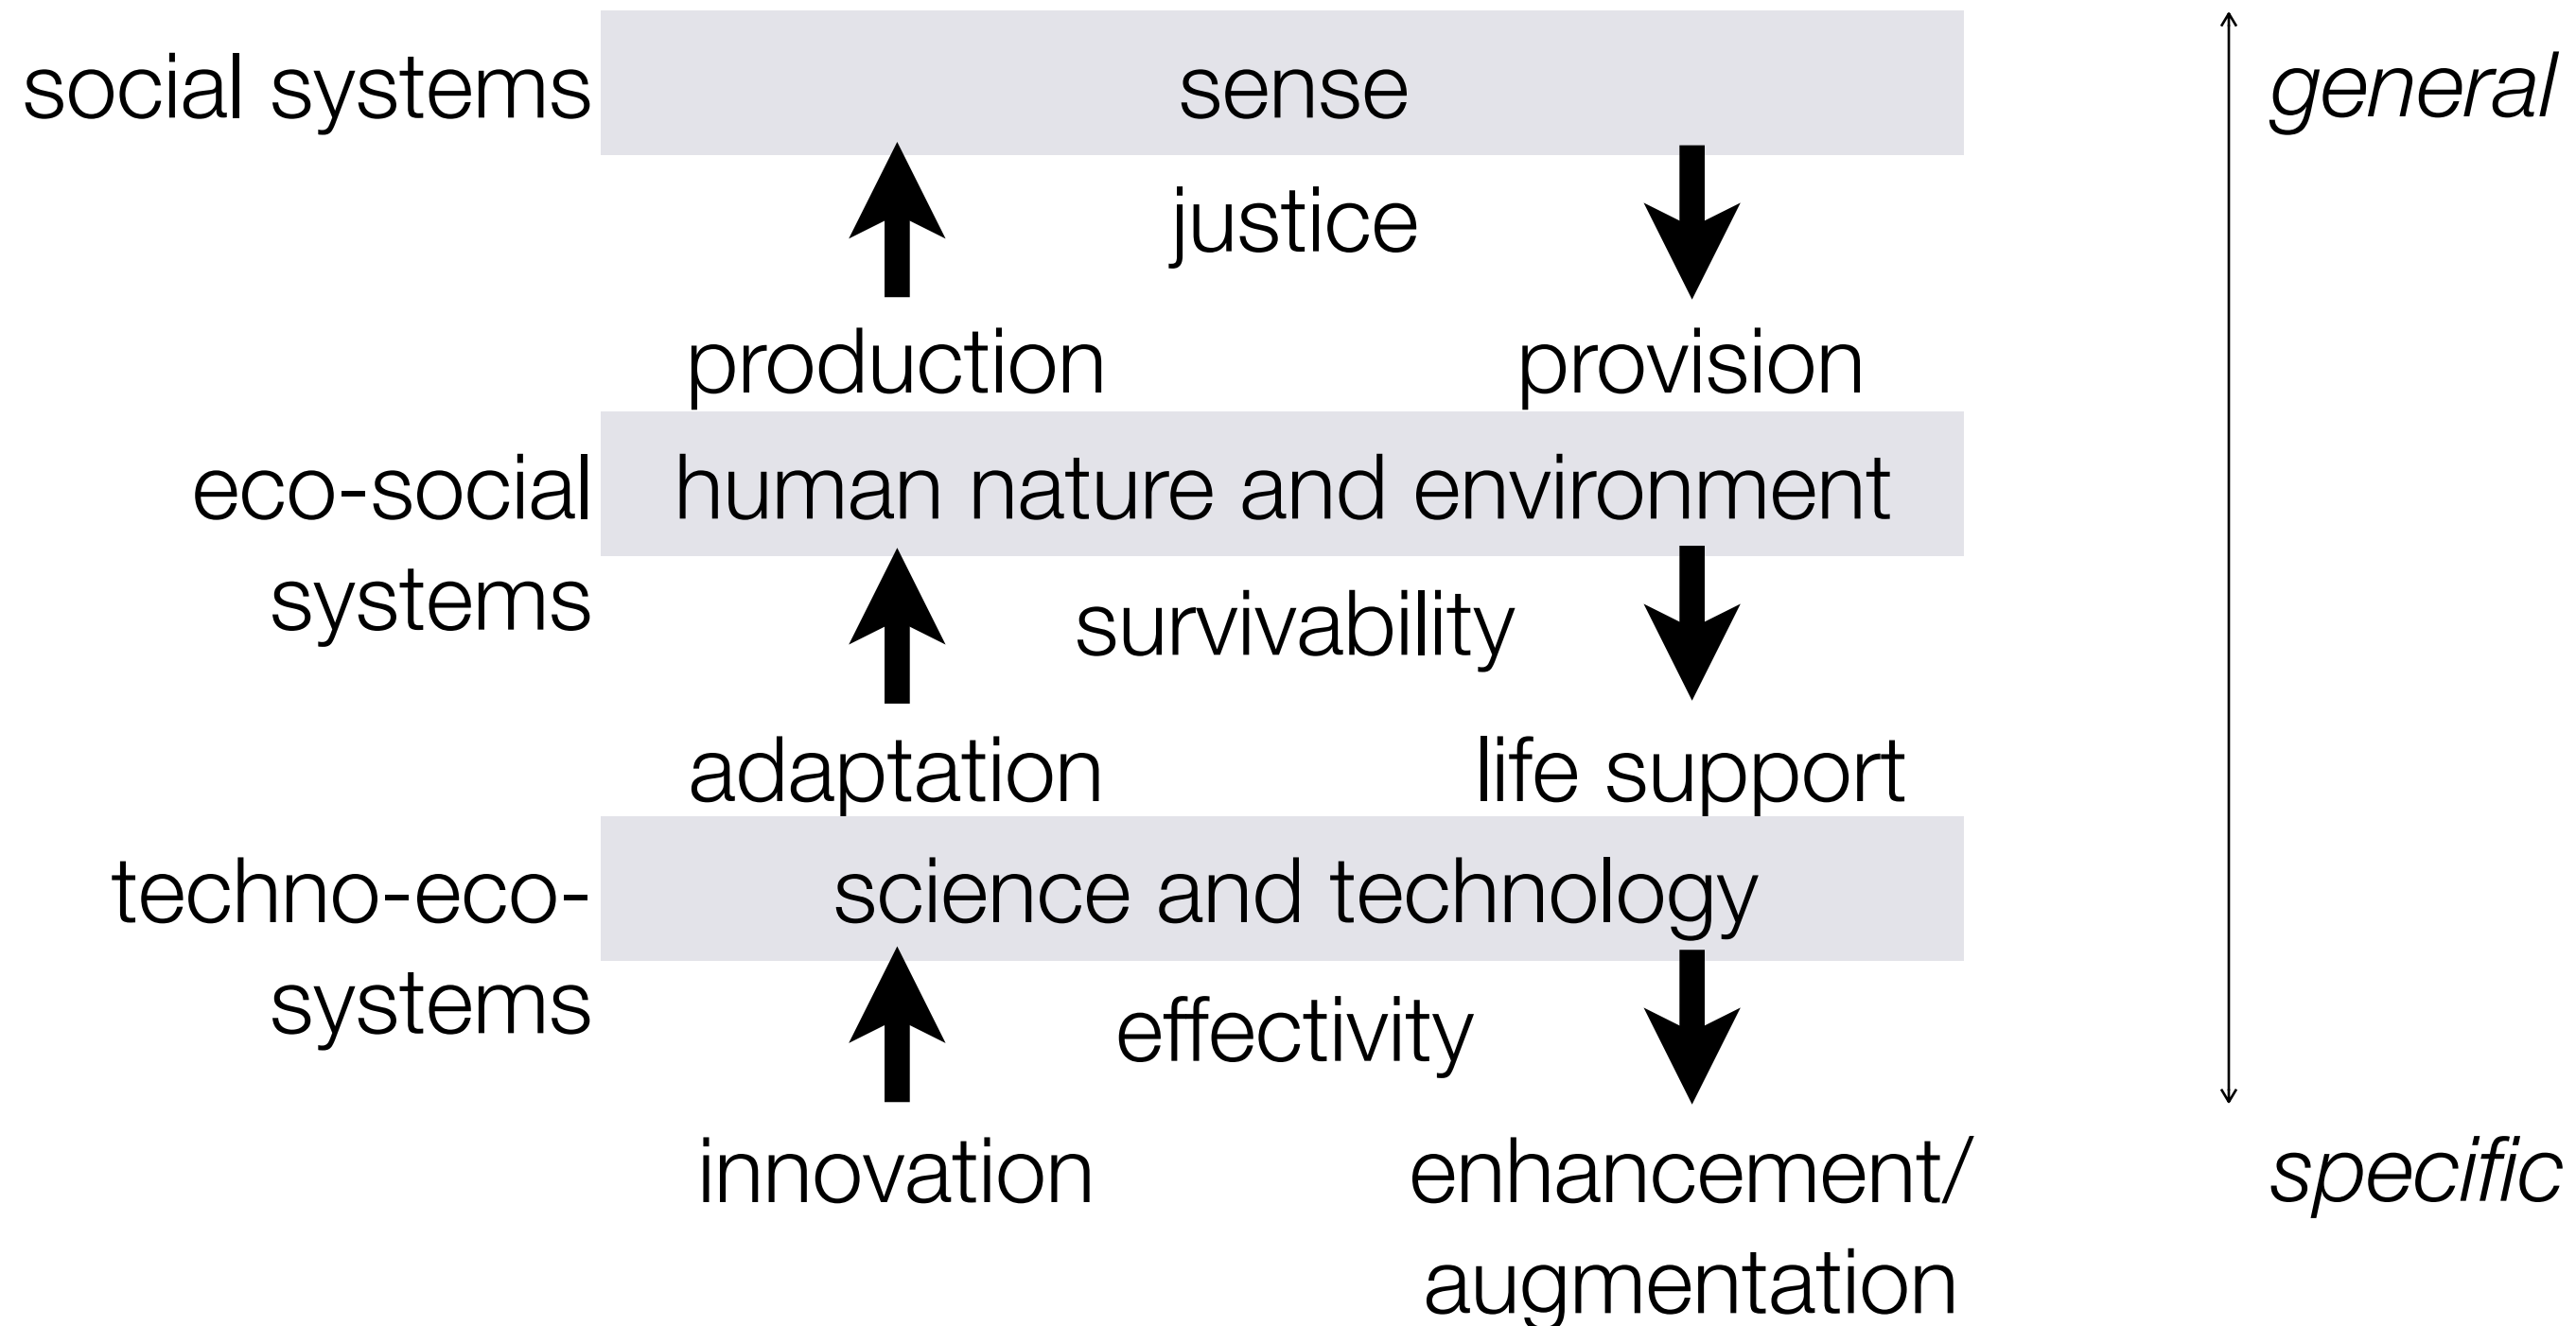

## 2.1 The enclosure of the commons

### social frictions

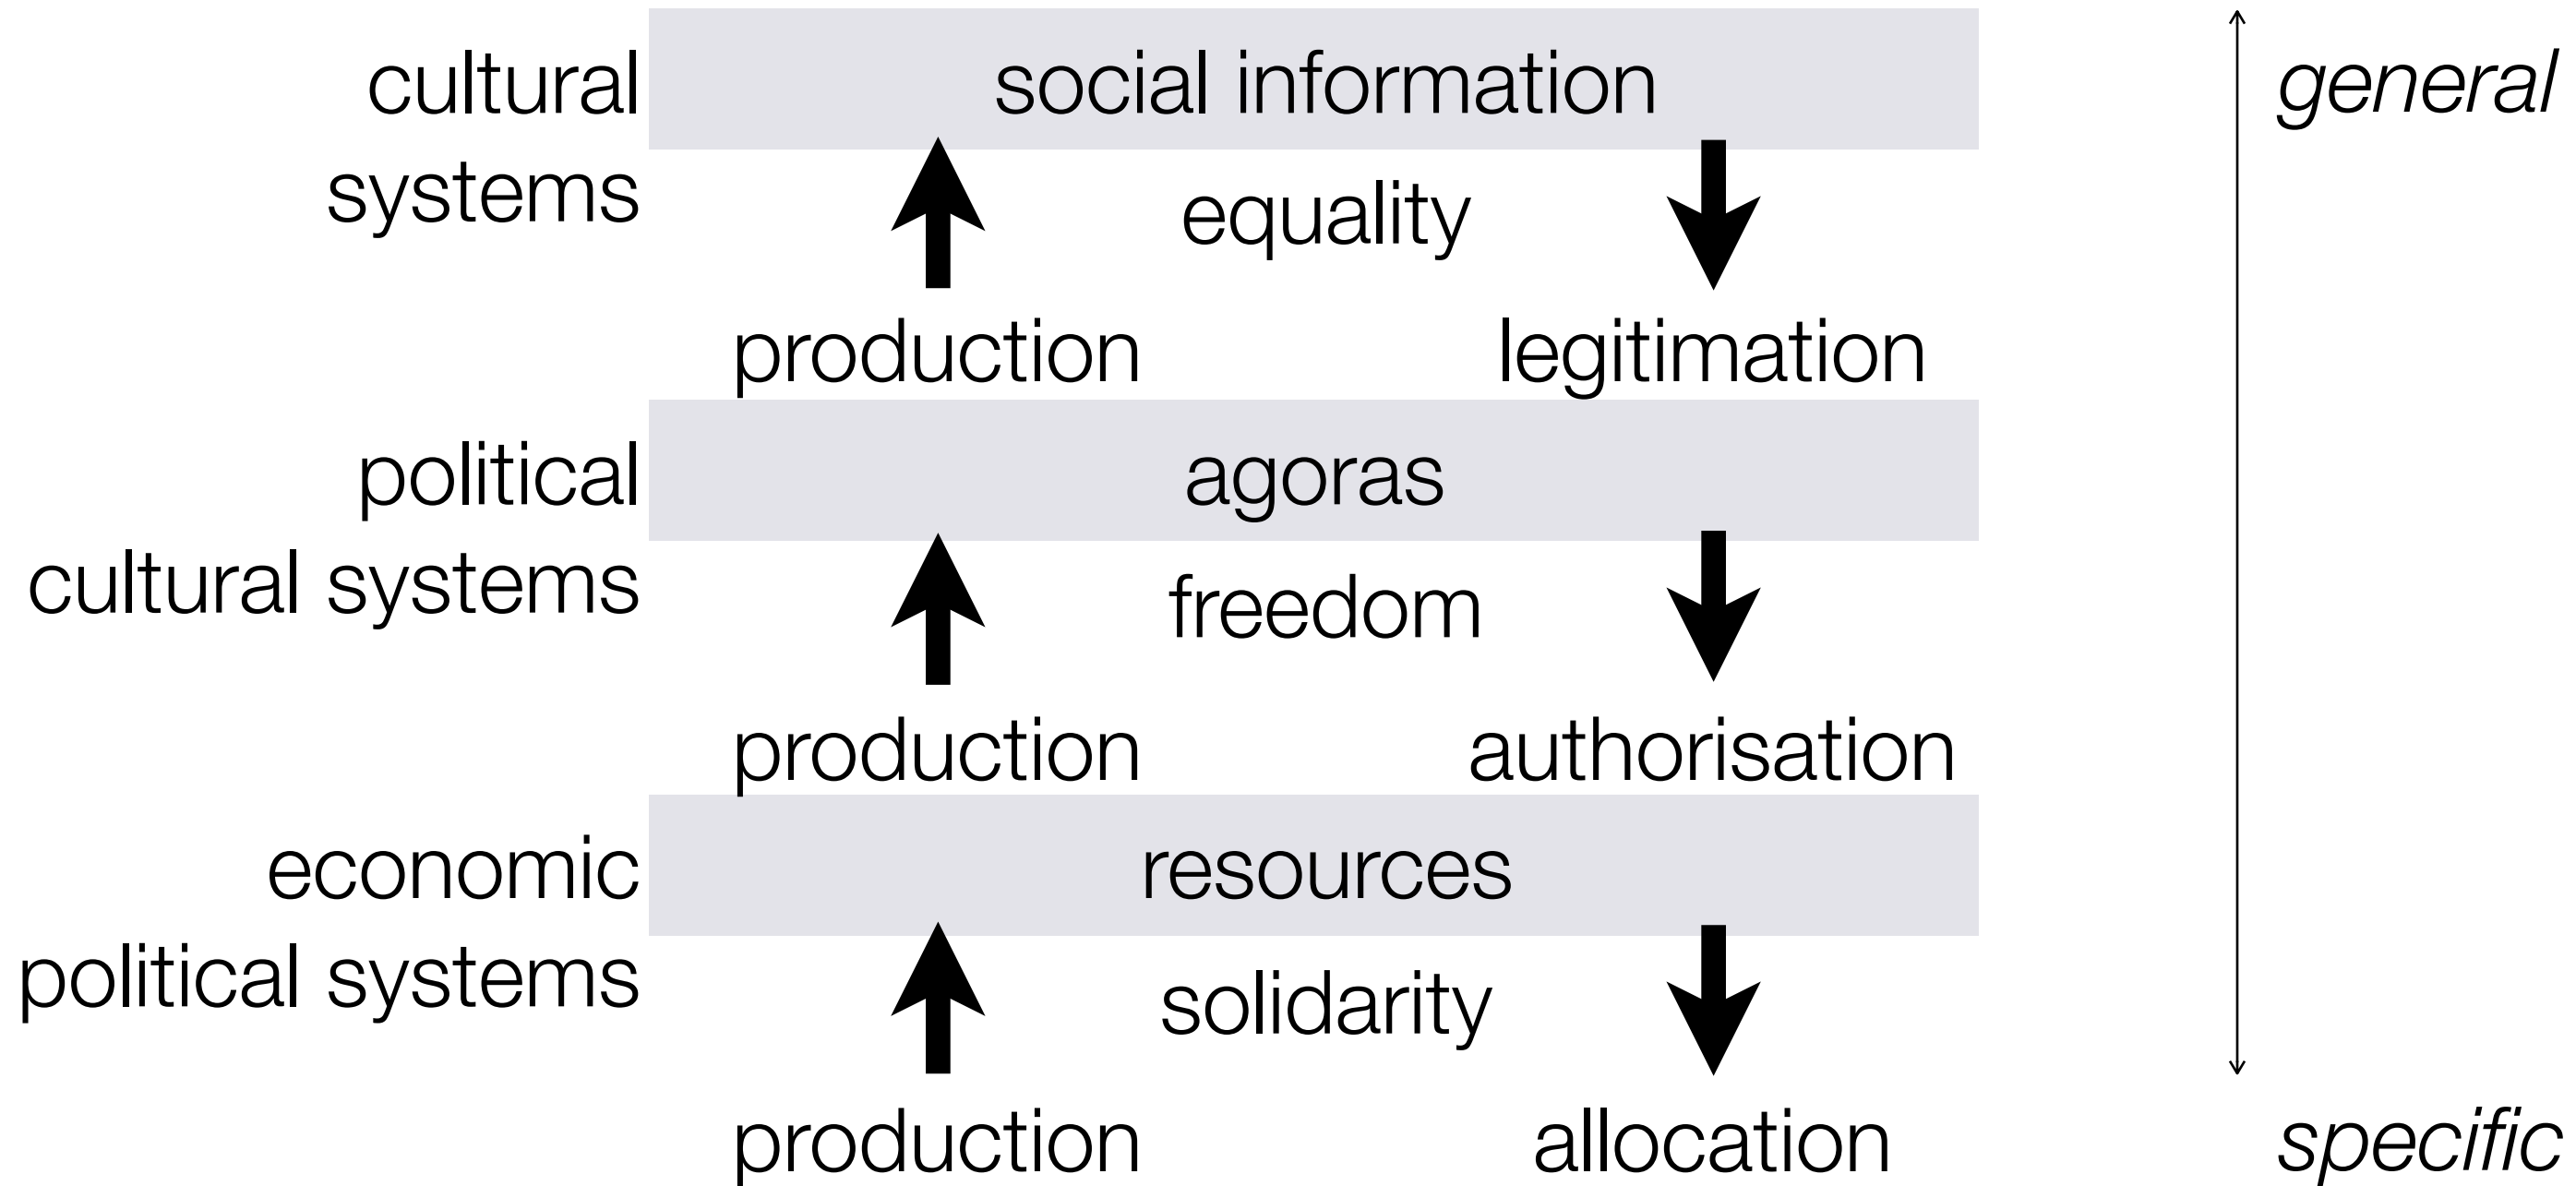

## 2.1 The enclosure of the commons

---

## 2.1 The enclosure of the commons

---

## 2.2 The current crises

---

|                                     |  |
|-------------------------------------|--|
| <b>commons</b>                      | <b>imminent dangers of particularism</b>                             |
| <b>social information</b>           | fundamentalistic ideology...   |
| <b>agoras</b>                       | authoritarian rule (right wing)...                                   |
| <b>resources</b>                    | financial capital dominance, split-up of labour...                   |
| <b>human nature and environment</b> | progressive colonisation...  |
| <b>science and technology</b>       | military and industry funded, big science, meaningless technology... |

## 2.2 The current crises

---

in times of crises systems decouple from each other

but they are in the position to relink on a greater scale

## 2.2 The current crises

---

- as long as social systems could externalise effects, their self-organisation was compatible with the enclosure of the commons; now that they are interconnected as they are, the enclosure of the commons is not tenable any more!

## 3 The dialectic of informatisation

---

## 3.1 Informationalisation for the transformation

---

information reduces the frictions

### 3.1 Informationalisation for the transformation

---

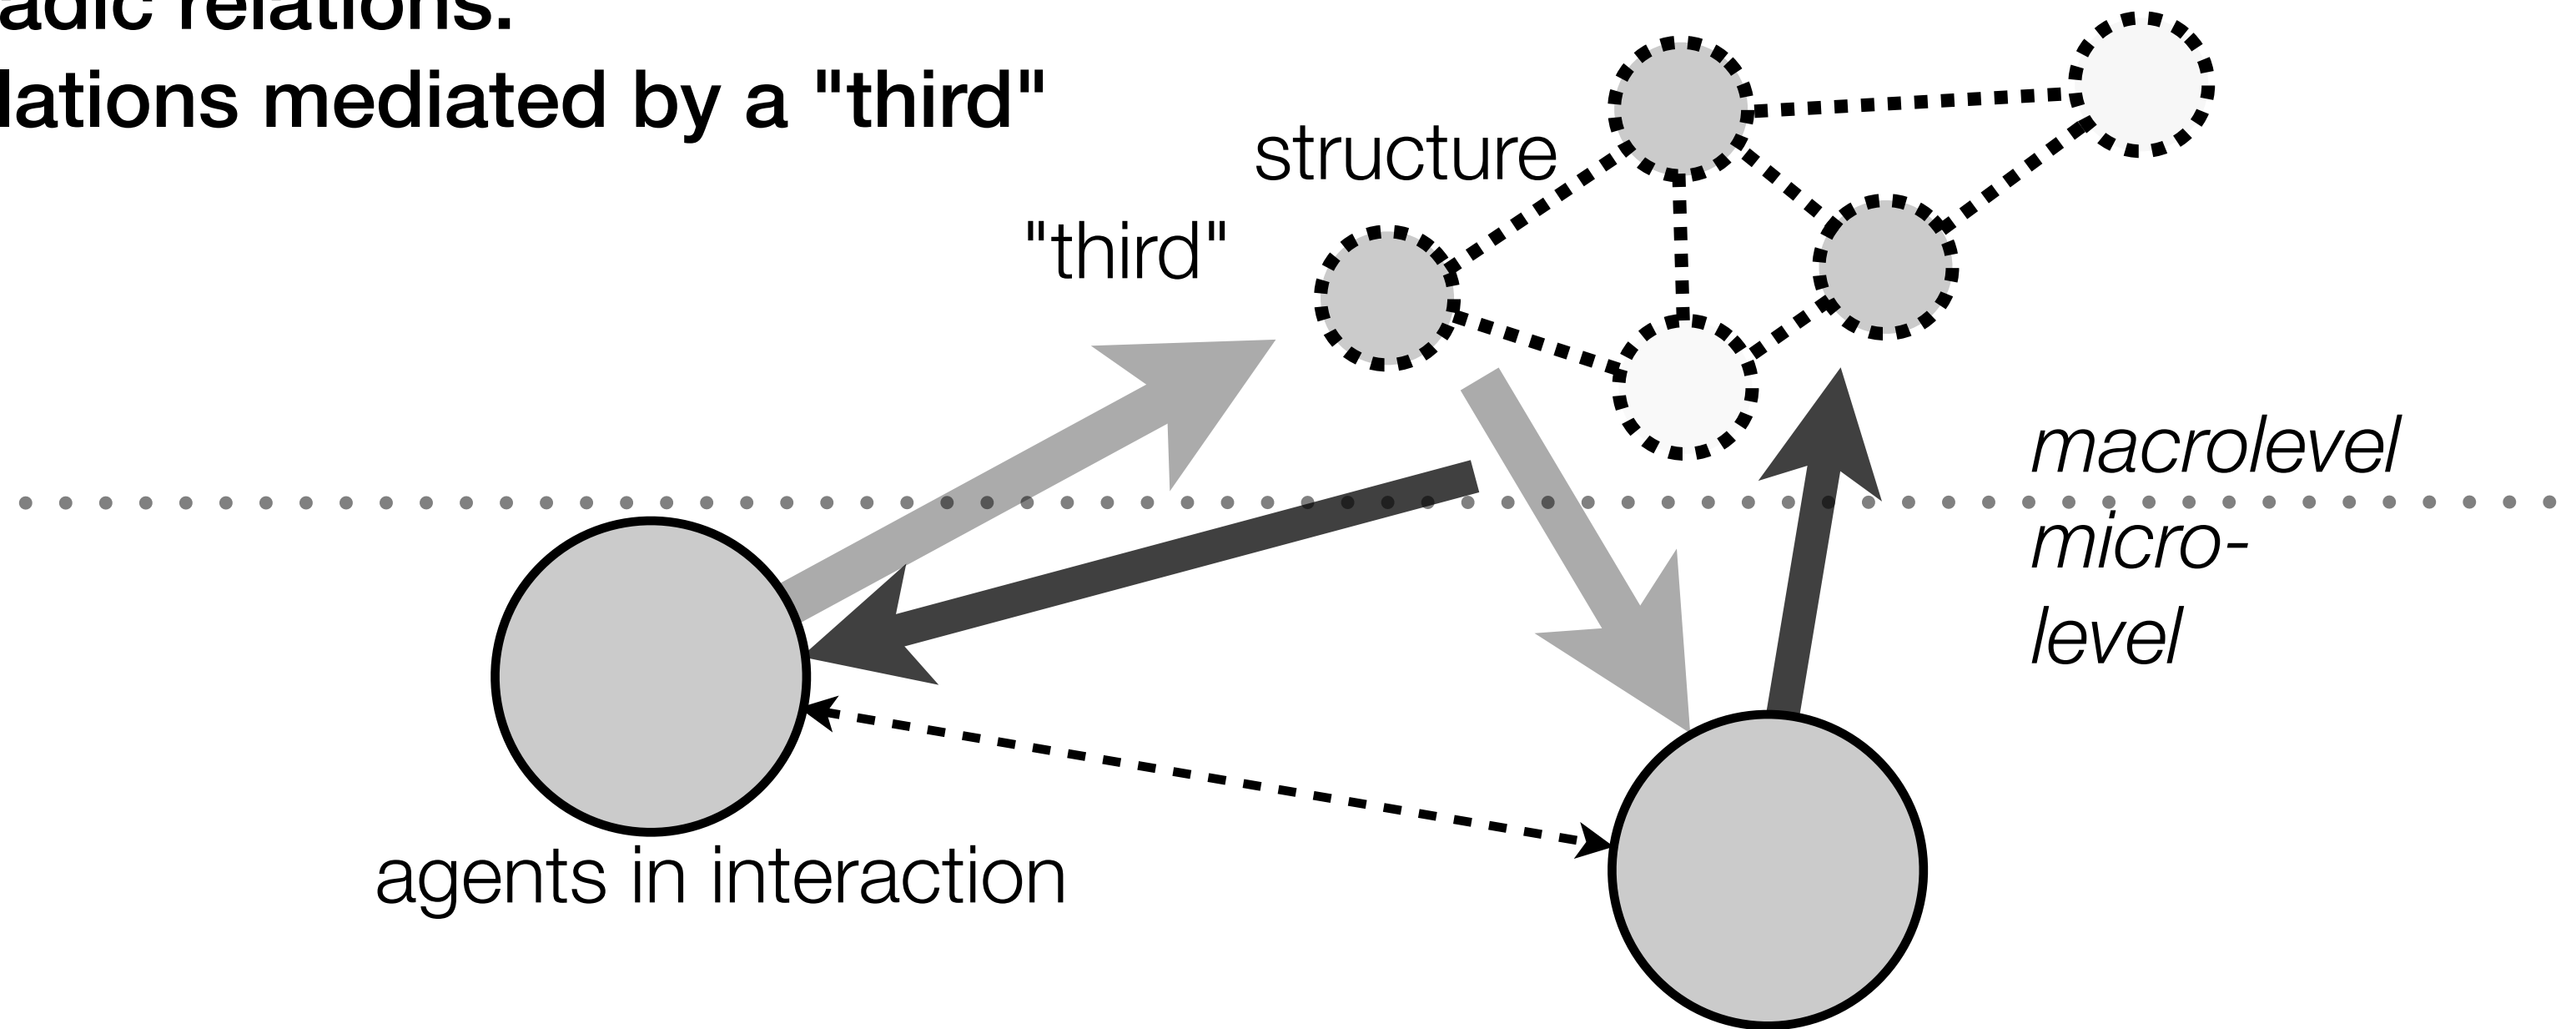

**dyadic relations:  
immediate relations**

### 3.1 Informationalisation for the transformation

---

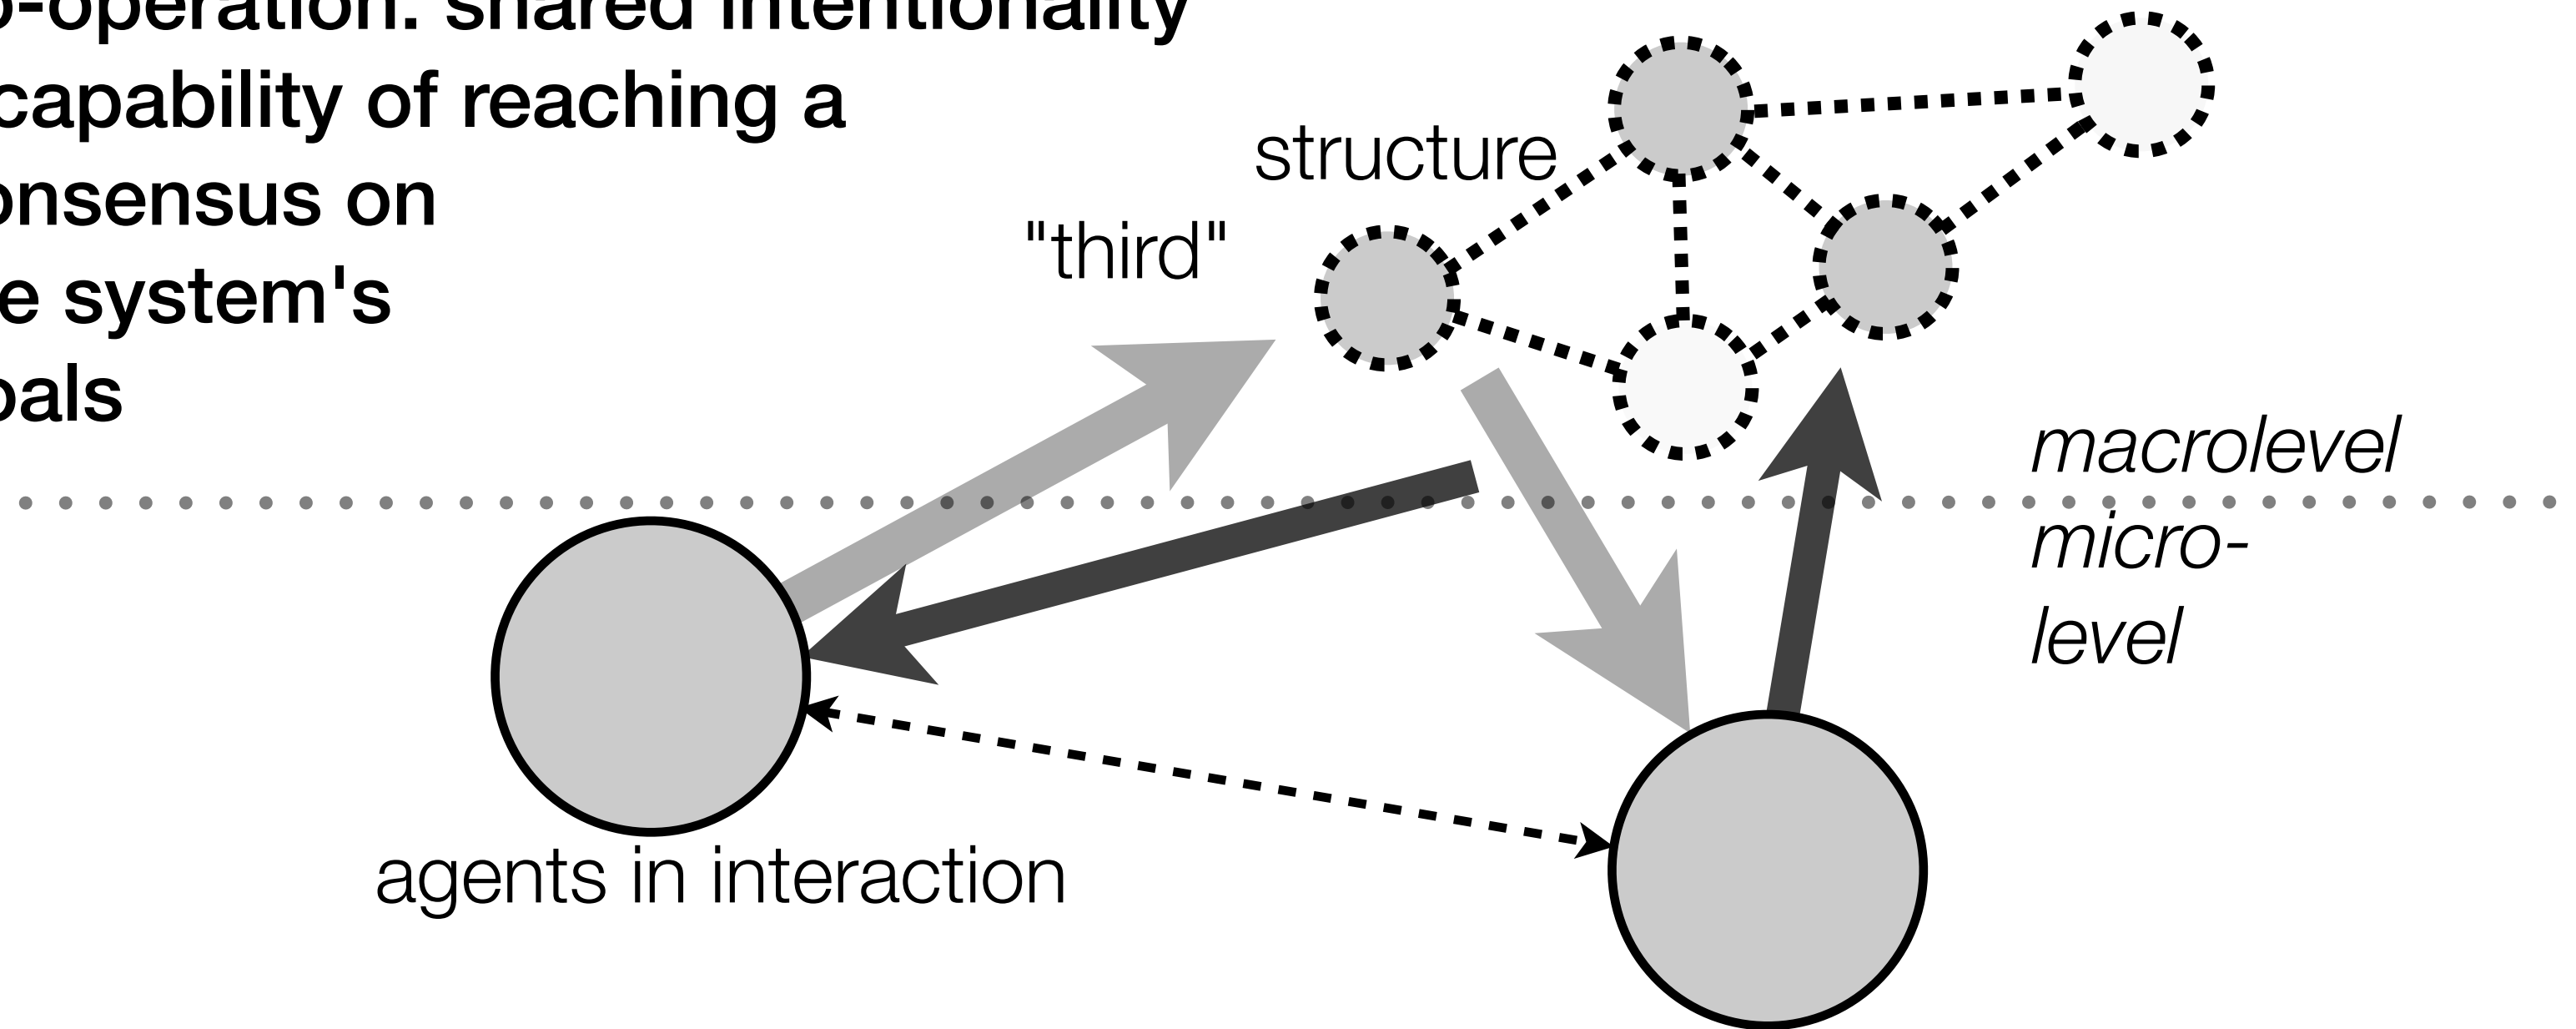

**triadic relations:  
relations mediated by a "third"**

### 3.1 Informationalisation for the transformation

---

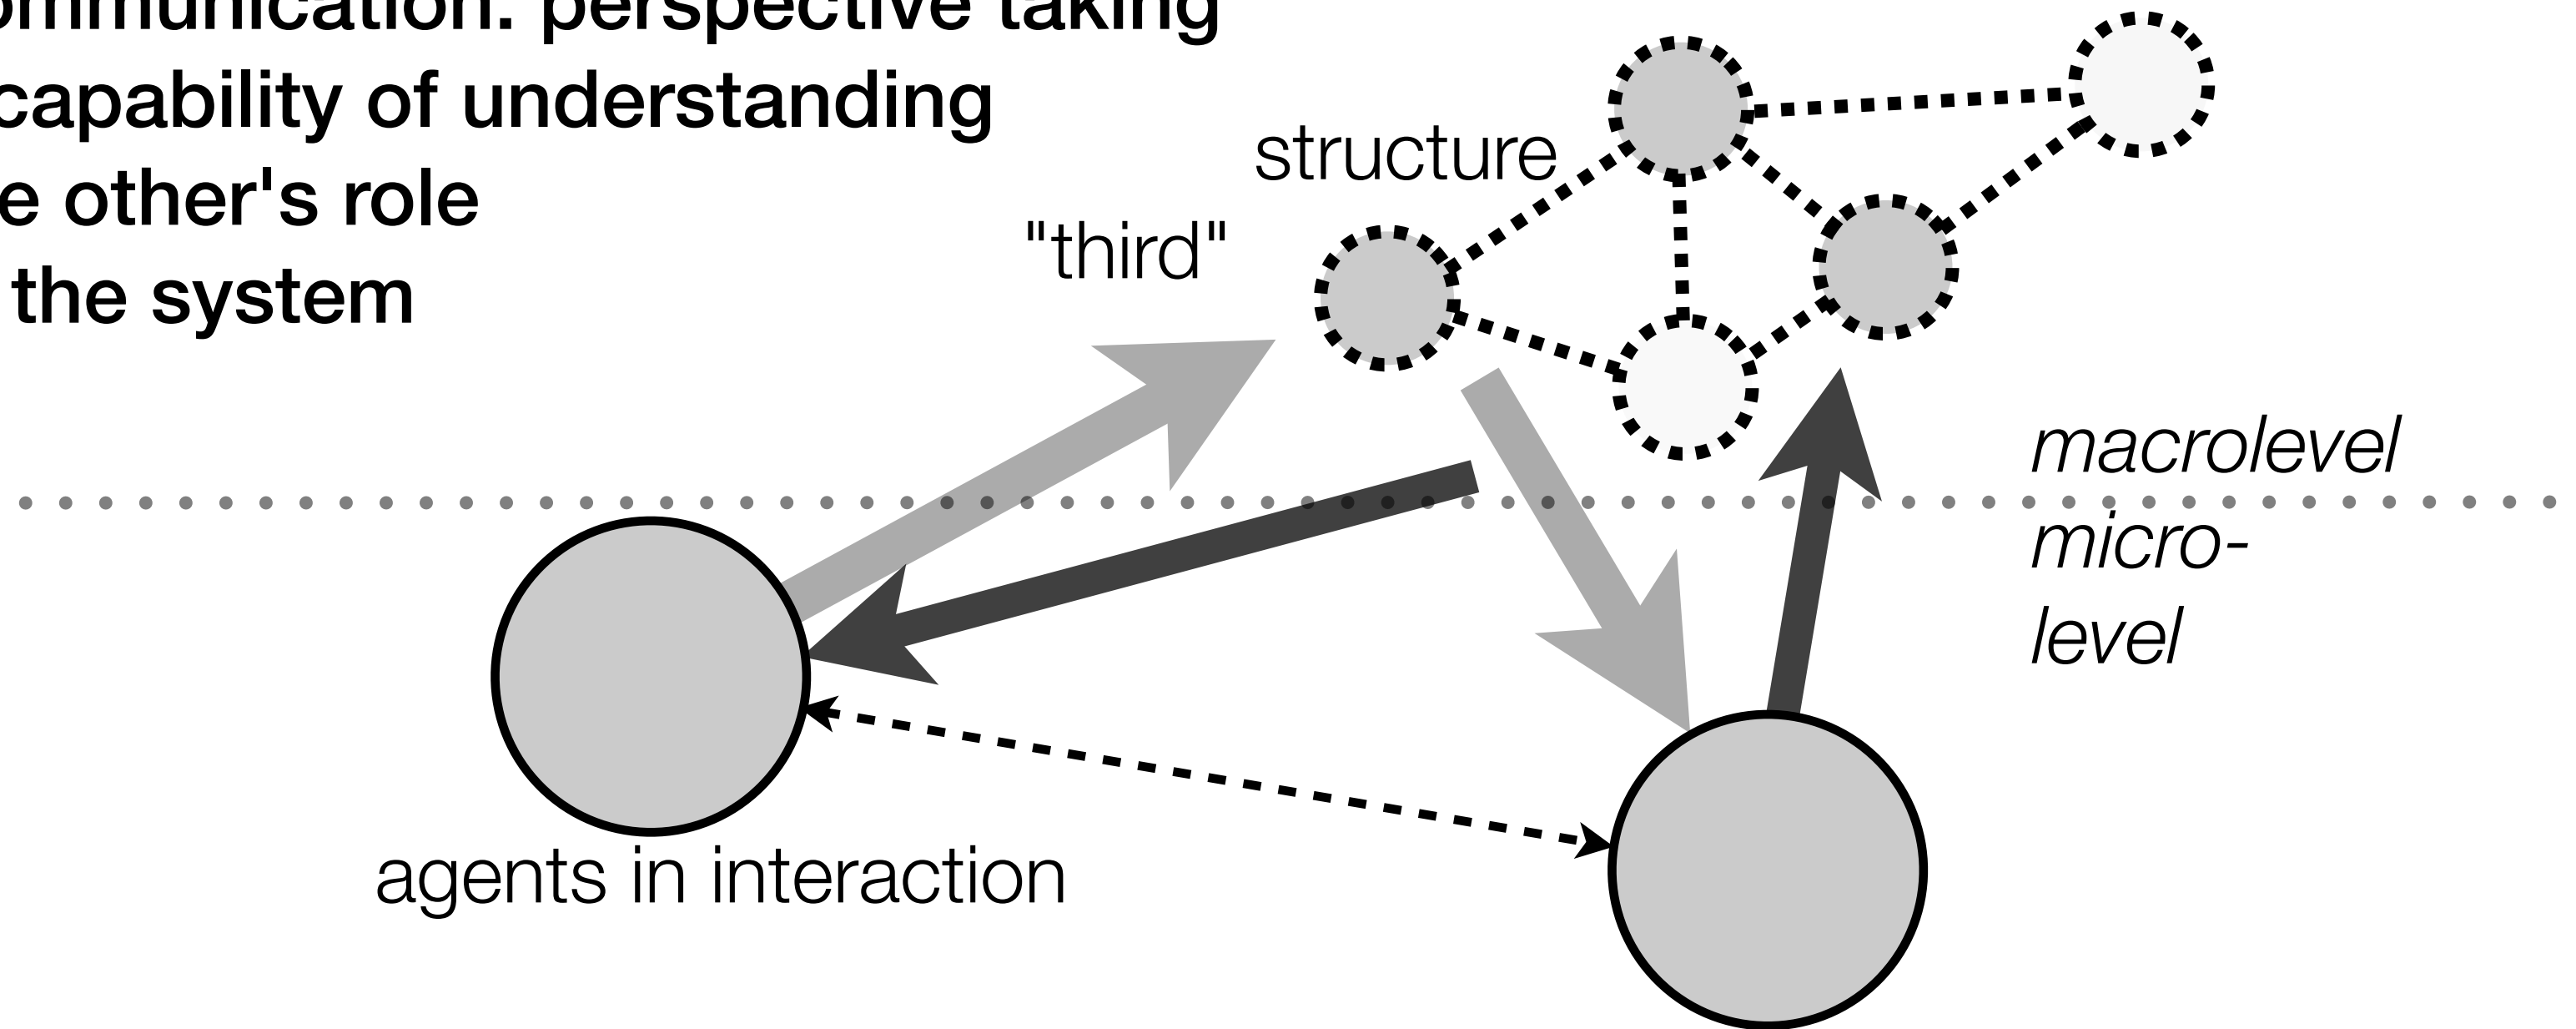

**co-operation: shared intentionality**  
– capability of reaching a consensus on the system's goals

### 3.1 Informationalisation for the transformation

---

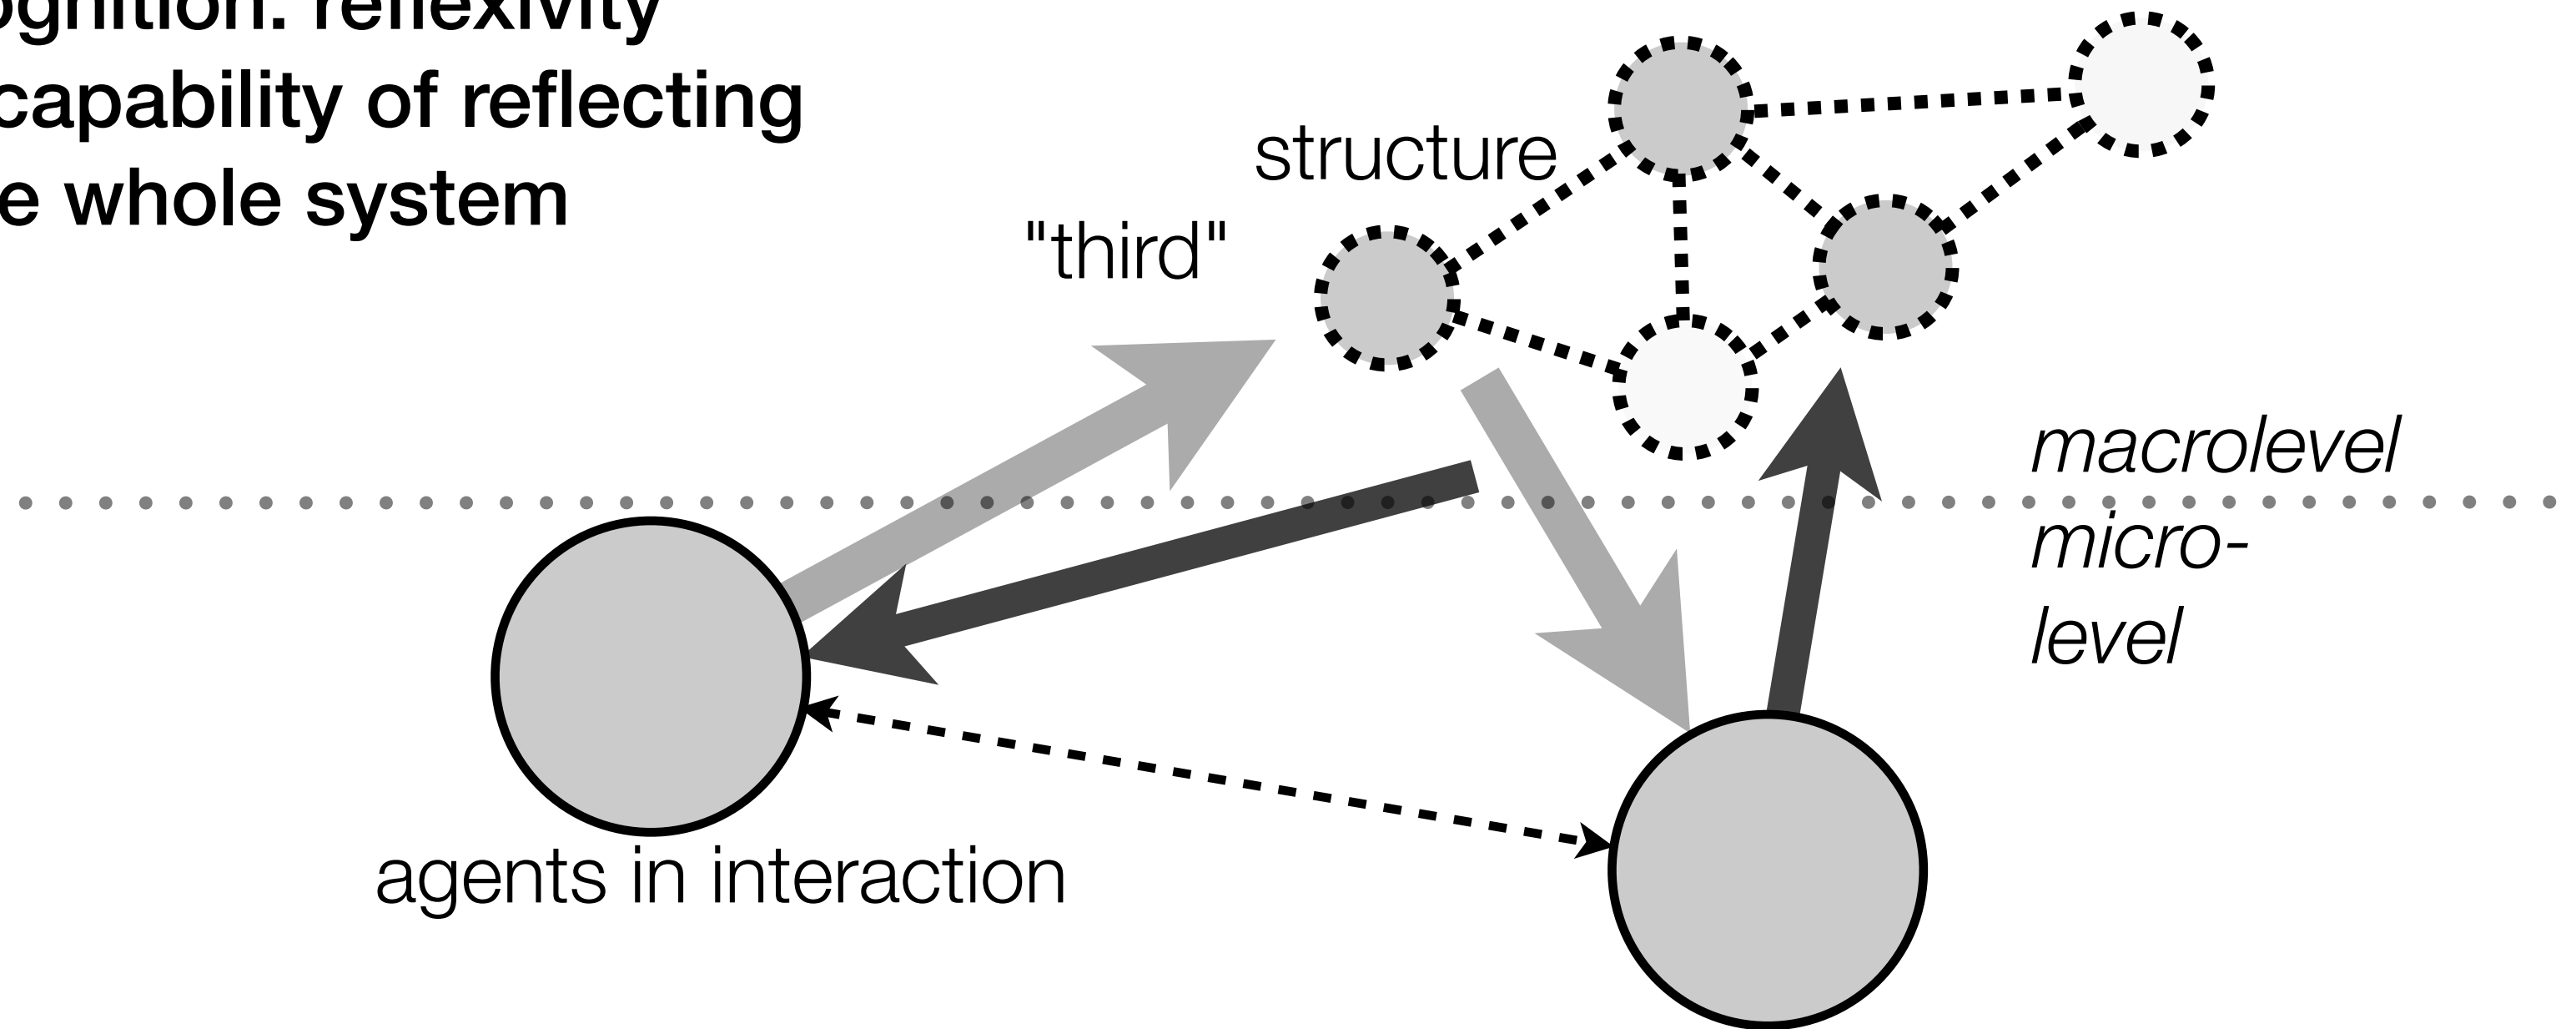

**communication: perspective taking**  
– capability of understanding  
the other's role  
in the system

### 3.1 Informationalisation for the transformation

---

**cognition: reflexivity**  
– capability of reflecting the whole system

### 3.1 Informationalisation for the transformation

**Global  
Sustainable  
Information  
Society**

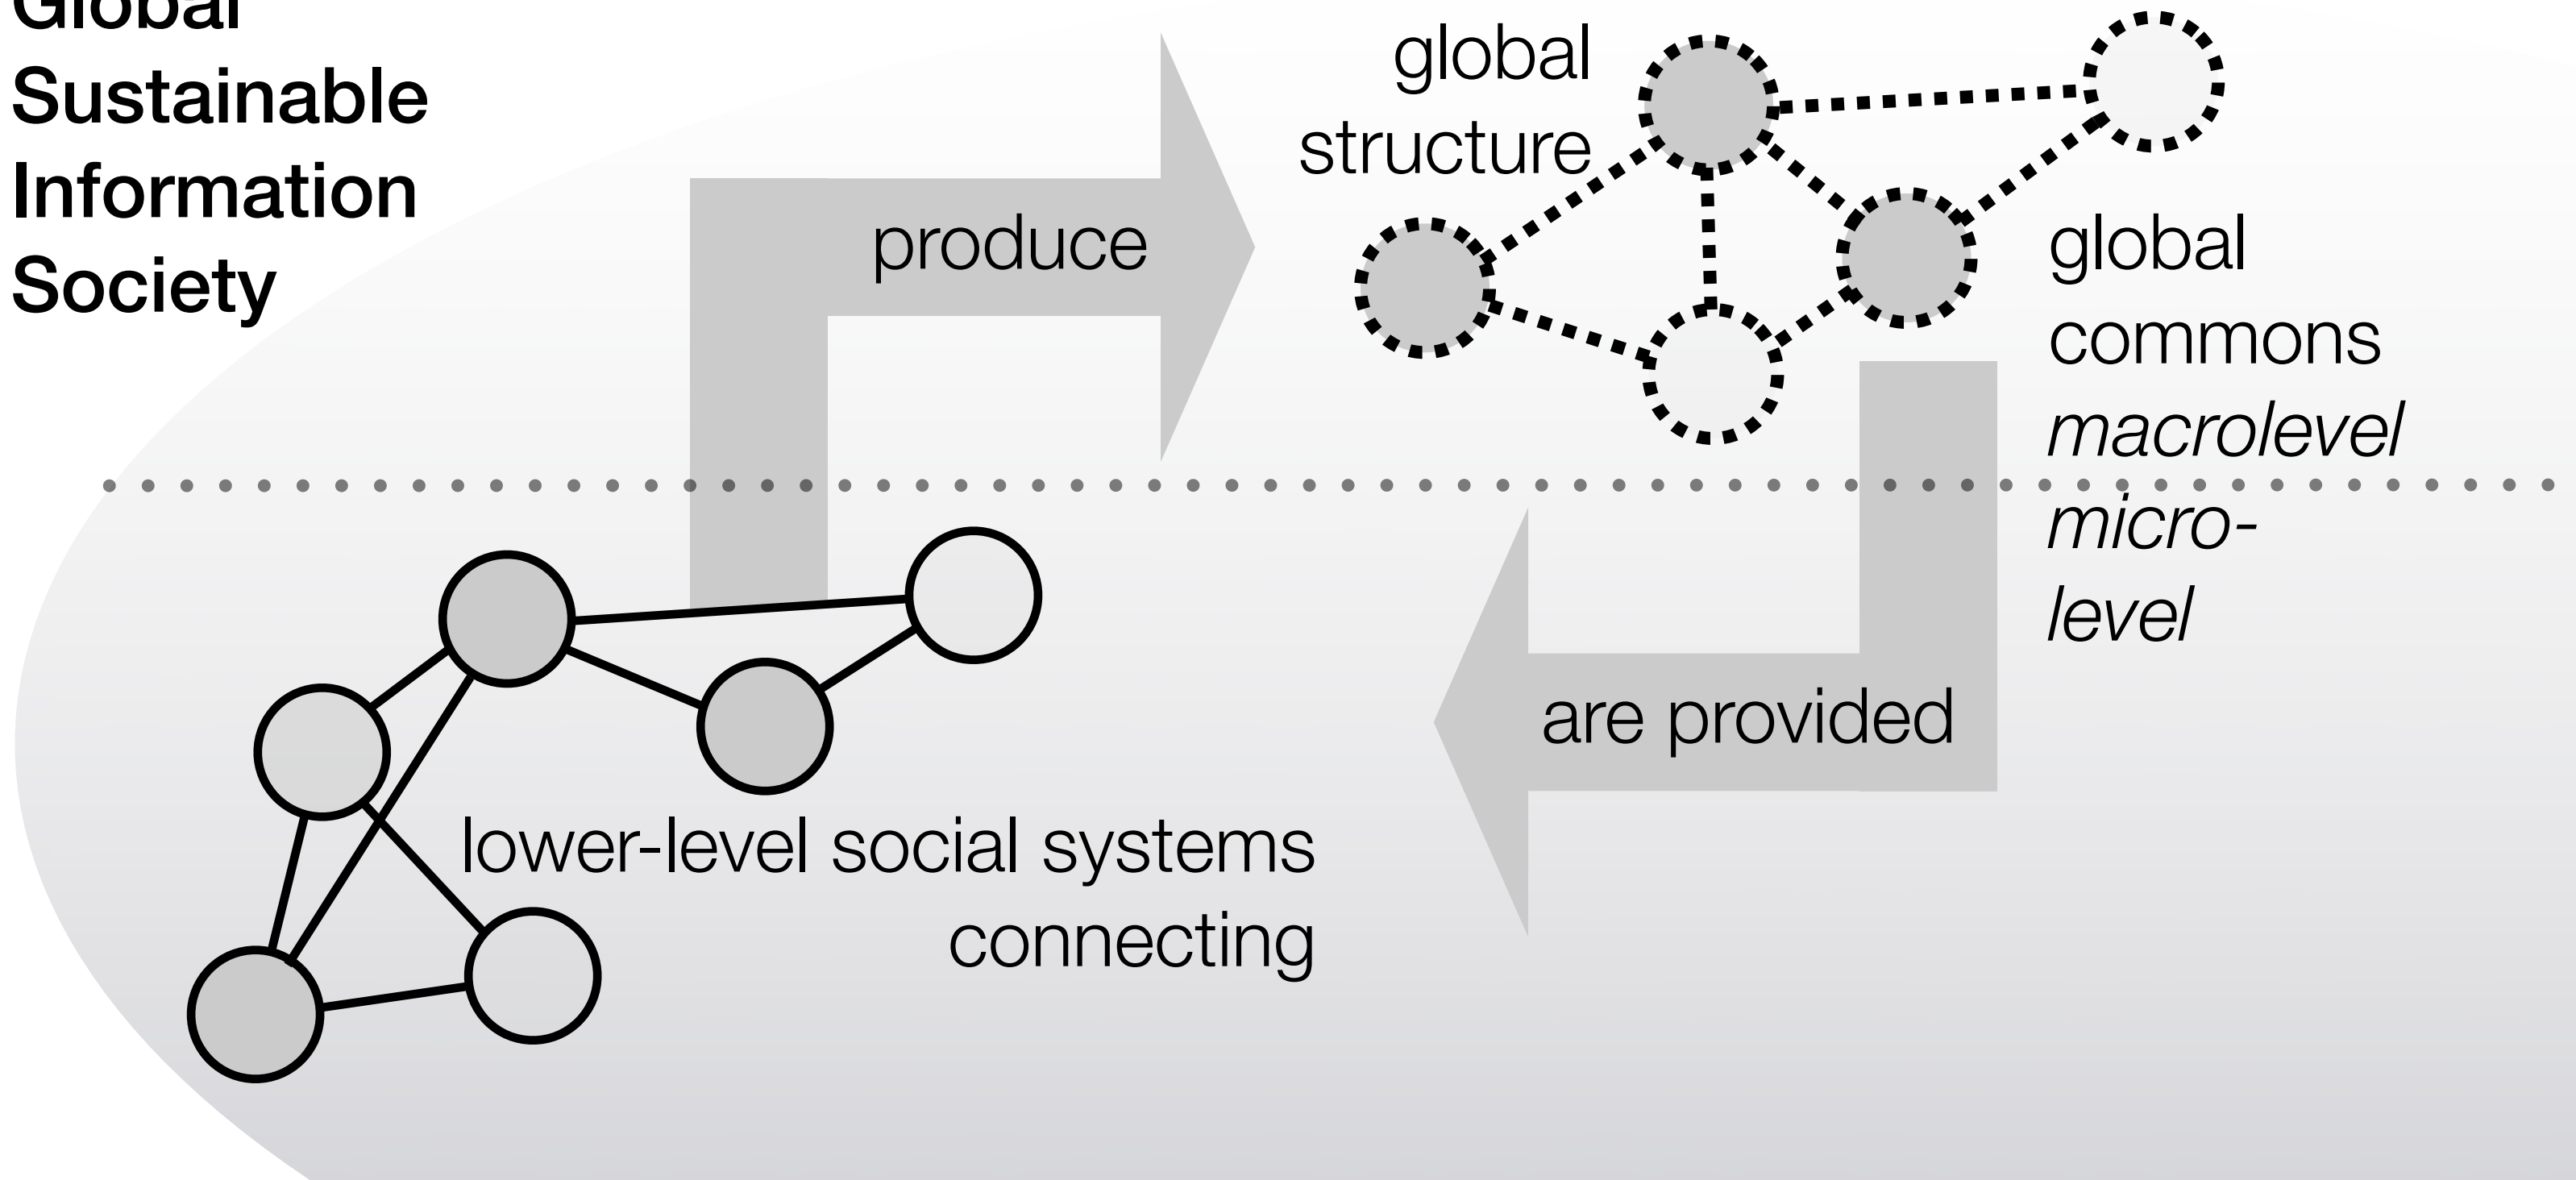

produce

lower-level social systems  
connecting

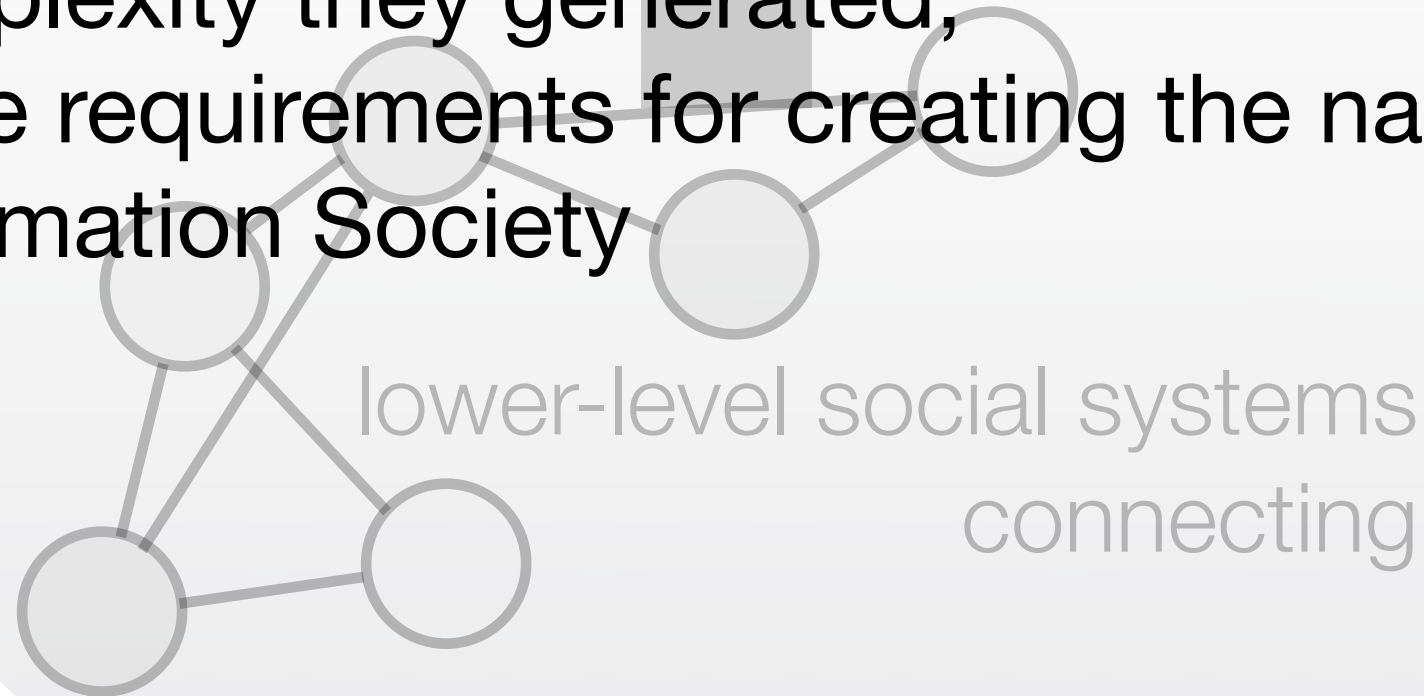

## 3.1 Informationalisation for the transformation

---

what is to be

- shared for co-operative goal-setting and -seeking;
  - negotiated in communication processes;
  - reflected through thorough cognitive deliberation, by agents and social systems in order to catch up with the complexity they generated,
- is the requirements for creating the nascent **Global Sustainable Information Society**

global

structure

are provided

## 3.2 Antagonisms of informatisation

---

### informatisation

- reinforces existing dislocations, quantitatively,
- spans new dislocations, qualitatively,
- provides potentials for informationalisation, sustainabilisation, and globalisation, qualitatively

## 3.2 Antagonisms of informatisation

---

| <b>social systems</b>             | <b>antagonisms between...</b>                                    |   |
|-----------------------------------|--|---|
| <b>cultural systems</b>           | wisdom and media<br>disinfotainment                              | informed world<br>netizenship and<br>digital divide |
| <b>political cultural systems</b> | empowerment and<br>surveillance/infowar                          |   |
| <b>economic political systems</b> | unfettered information<br>and intellectual<br>proprietaryisation |   |
| <b>eco-social systems</b>         | reproductivity and ICT-aided degradation                         |   |
| <b>techno-eco-systems</b>         | productivity and ICT-aided vulnerability                         |   |

## 3.2 Antagonisms of informatisation

---

- the so-called social media like any ICTs can have ambiguous impacts on the social system they support:
- on the one hand, a potential for reducing frictions in the functioning of social systems inheres in them so as to sustain the continuation of the latter;
- on the other hand, they can be functionalised for purposes detrimental to reclaiming the commons;
- thus they need to be designed deliberately!

---

thanks!
